Where To Download

In vector calculus, the gradient of a scalar-valued differentiable function f of several variables is the vector field (or vector-valued function) whose value at a point is the vector whose components are the partial derivatives of f at that point. [excessive citations] That is, for $f: \mathbb{R}^n \rightarrow \mathbb{R}$, its gradient $\nabla f: \mathbb{R}^n \rightarrow \mathbb{R}^n$ is defined at the point $\mathbf{a} = (a_1, \dots, a_n)$ in n -dimensional space as the vector:
