Calculus I - Applications of Derivatives (Practice Problems)

In calculus, differentiation is one of the two important concepts apart from integration. Differentiation is a method of finding the derivative of a function. Differentiation is a process, in Maths, where we find the instantaneous rate of change in function based on one of its variables.

Differentiation in Calculus (Derivative Rules, Formulas ...)

The uses of calculus are based on the fields wherever we structure the problems in mathematical models and optimal solutions. How to find the maxima and minima of a function? Maxima is the highest point and minima is the lowest point of a function, which could be determined by finding the derivative of the function.

Calculus (Differential and Integral Calculus with Examples)

Historical notes. In applied mathematics and mathematical analysis, a fractional derivative is a derivative of any arbitrary order, real or complex. Its first appearance is in a letter written to Guillaume de l'Hôpital by Gottfried Wilhelm Leibniz in 1695. Around the same time, Leibniz wrote to one of the Bernoulli brothers describing the similarity between the binomial theorem and the ...
