Designing Audio Power Amplifiers

In electronics, Amplifier is the most commonly used circuit device with huge application possibilities. In Audio related electronics pre-amplifier and power amplifiers are two different types of amplifier systems which are used for sound amplification related purposes. But, other than this application-specific purpose, there are huge differences in various types of amplifiers, mainly in Power ...

A sound reinforcement system is the combination of microphones, signal processors, amplifiers, and loudspeakers in enclosures all controlled by a mixing console that makes live or pre-recorded sounds louder and may also distribute those sounds to a larger or more distant audience. In many situations, a sound reinforcement system is also used to enhance or alter the sound of the sources on the ...

Idle power consumption and overall efficiency were key concerns of innosonix when designing its latest high-end Maxx Series multi-channel power amplifier. By changing from traditional silicon FETs to EPC's EPC2059 eGaN FET the company reduced idle loss by 35 per cent and lowered the on resistance to increase the total power efficiency by 5 ...
