590 Chapter 9 Extending Perimeter, Circumference, and Area Find each measurement. B the height of a rectangle in which $b = 5$ cm and $A = (5x^2 - 5x)$ cm² $A = bh$ Area of a rectangle Substitute $5x^2 - 5x$ for A and 5 for b . Factor 5 out of the expression for A . Divide both sides by 5 . Sym. Prop. of $=$ $5x^2 - 5x = h \cdot 5$ $(x^2 - x) = 5h$ $x^2 - x = h$ $h = (x^2 - x)$ cm

Approximations for the mathematical constant pi (π) in the history of mathematics reached an accuracy within 0.04% of the true value before the beginning of the Common Era ().In Chinese mathematics, this was improved to approximations correct to what corresponds to about seven decimal digits by the 5th century.. Further progress was not made until the 15th century (through the efforts of ...

$s = r\theta$, where s =arc length,
 θ =subtending angle and r =radius.
Extending the above concept, the
perimeter of a circle, which is termed as
the circumference, is mathematically
expressed as $C=2\pi r$, where $\pi=3.14$. For
more complex curves, the length can be
determined by calculus, as an integral.
