Today, the Microsoft Turing team is thrilled to introduce Turing Bletchley, a 2.5-billion parameter Universal Image Language Representation model (T-UILR) that can perform image-language tasks in 94 languages. T-Bletchley has an image encoder and a universal language encoder that vectorize input image and text respectively so that semantically similar images and texts align with each other ...

Microsoft's Common Objects in Context dataset is the most popular object detection dataset at the moment. It is widely used to benchmark the performance of computer vision methods. Due to the popularity of the dataset, the format that COCO uses to store annotations is often the go-to format when creating a new custom object detection dataset.

Image Credit: “Microsoft Coco: Common Objects in Context Dataset”, <https://cocodataset.org>: As stated before, the single-pose estimation algorithm is the simpler and faster of the two. Its ideal use case is for when there is only one person centered in an input image or video. The disadvantage is that if there are multiple persons in an ...
