Sugar is the generic name for sweet-tasting, soluble carbohydrates, many of which are used in food. Simple sugars, also called monosaccharides, include glucose, fructose, and galactose. Compound sugars, also called disaccharides or double sugars, are molecules made of two monosaccharides joined by a glycosidic bond. Common examples are sucrose (glucose + fructose), lactose (glucose + galactose ...

Nepal's sugar mills could generate significant surplus power during dry season when power generation from hydropower projects is running low. Even the quickly available potential from the 'incidental' option at 20,750 MWh/year is more than double NEA's current thermal generation and would require only little additional investment.
